

About Somfy

Somfy's leading smart management solutions for homes and buildings have been improving people's daily lives for over 50 years. Developed with comfort, ease of use, security and sustainability in mind, our innovations automate and connect rolling shutters, curtains and blinds, gates and garage doors, lighting and heating, alarms systems and more. We are committed to creating useful solutions that are accessible to all, designed for today and beyond.

Somfy in Brief

Operating in

59

Countries

Somfy has spent the last 50 years making everyday life easier for millions of users around the world by developing smart home and building management solutions.

8

Production
Sites

We innovate to automate and connect all types of equipment to open and close the shade, windows, terraces, doors and gates using connected motors that operate them together using intelligence and make them interoperable with other household equipments. In addition to motorisation, Somfy solutions include accessories for control, comfort and security. Occupants are central to our concerns and we constantly strives to create reliable long-term solutions that offer a better way of living and increased well-being for everyone. *This is what Somfy calls smart living.*

ACT FOR
GREEN

1960s: A pioneering spirit

Société d'Outillage et de Mécanique de Faucigny (Mechanical Tooling Company of Faucigny) took shape between 1960 to 1967. The company changed the name to SOMFY in 1963 and became a limited company. In Cluses, at the foot of Mont Blanc, Somfy develops the first tubular motor, marking the end of crank handle and ushering in electric roller shutters, screens, awnings and blinds. Our story begins in France, Germany and Sweden, where the company already has subsidiaries. The adventure has begun!

1970s: Expansion

With dedication and experimental spirit, Somfy overcomes many technological challenges and "gives birth" to the LS70, 60, 50 family. It is also the time to look out for international expansion.

1981: Home automation begins

Somfy launches 'Somfy-matic', the first weather controlled awnings and shutters; capable of sensing weather conditions and automatically adjusting awnings and shutters appropriately.

1989: Tonight, Somfy is on TV!

Somfy's first television campaign is broadcast at prime time in France. By 2005, the campaigns become international. Somfy goes from being a brand reserved for professionals to an end-user brand.

1997: Long live radio!

Somfy integrates radio technology into its motors. Thanks to RTS (Somfy Radio Technology), roller shutters, screens, awnings and blinds can now be operated using a remote control. An additional advantage of radio technology is that a single remote can be used to control multiple products.

Somfy History

2000-2001: From roller shutters... to the whole house

The brand begins to motorise garage doors and gates. It also acquires the company, Domis, a designer of wireless alarm systems. At the dawn of the new millennium, Somfy products are able to control all openings in the home as well as its security.

2010 :Controlling your home is easy with TaHoma!

100% cloud, 100% radio, 100% open: the TaHoma interface allows control from any smart devices or computers.

2015: Quiet, smart motors

The latest generation of motors for roller shutters arrives on the market. Smart, quiet and eco-friendly.

2017: WireFree™ battery operated motor

WireFree™ technology brings true peace of mind and home comfort accessible.

2018: "So Open with Somfy"

Heating, light, music and virtual assistants... Somfy expands its partnership program to enrich the connected home experience. In June, the brand opens its APIs to developers for even more freedom.

2019: Happy 50th anniversary

Having celebrated our 50th anniversary, Somfy continues with the innovation journey to inspire a better way of living that is accessible to all.

2020: Connected Devices

More than 8 millions of products have been connected through our home automation boxes, worldwide.

“Enjoy a better way of living with Somfy’s range of motorised window coverings for interior and exterior applications”

Designed to provide **easy, cosy comfort**, Somfy’s automated solutions are an important enhancement for homes and commercial buildings. At the push of a button or control on App with mobile devices or even automatically, they will open or close, extend or retract, providing shade, privacy and security.

• **Customer support:**

We support our customers at all stages through our dedicated hotline, email, instant messaging and physical visits at their convenience. Somfy has an attentive after-sales service team to provide trouble-shooting support.

• **Technical support:**

- Advice on motor and controller solutions
- Assistance with special projects
- Advice on electrical requirements
- Providing wiring diagrams
- Installation support
- Trouble-shooting support
- After-sales service

Why Somfy

- **Marketing support:**

Somfy is dedicated to promoting the use of motorised and automated solutions. We are eager to work with our partners to generate awareness and convey product benefits through promotions, collaterals and advertising.

- **Product training:**

Somfy understands that training is essential for business and we host training regularly for our partners and customers. The training program is designed to increase your knowledge of motorisation and automation. Somfy can also offer training for individual companies tailored to suit your requirements.

- **Product quality:**

All our products are designed in Haute-Savoie by teams trained in the latest technologies. To guarantee their quality, performance and longevity, we perform regular testing and inspections according to rigorous process. Somfy has taken modernisation and digitalisation to a new level of focus. We believe a seamless experience is crucial to our customers in serving the markets.

- **Act for green:**

We act in favour of more efficient buildings, and for the well-being of their inhabitants. We take into account the environmental impact of our solutions throughout their life cycles. We act in favour of eco-designed products and more responsible practices in our operations.

All Somfy products carry a 5-Year Limited Warranty.*

Somfy offers a 5-year warranty on all motors and controls to our customers. Specifically, Somfy warrants its motors and controls to be free from defects in material and workmanship under normal and proper use for a period of 5 years commencing with the date stamped on each product.

Please feel free to contact our local sales office for more details.

Obligations

Somfy's only obligation shall be to repair or replace, with the least possible delay, defective equipment which does not conform to the warranty without any other indemnity relating to installation and re-installation or consequential damages.

Somfy shall not be liable for any injury, loss or damage, direct or consequential, arising out of the use of, or the inability to use, the equipment. Before using, the buyer and/or the end user shall determine the suitability of the product for its intended use, end user assumes all risks and liability in connection therewith.

The articles that are replaced pursuant to the terms of this warranty shall be retained by Somfy. All costs related to installation and re-installation of the Somfy equipment covered by this warranty are not the responsibility of Somfy.

The user is responsible for any freight costs relating to repair or replacement. Somfy will not be responsible for any consequential damages during or following installation procedures.

If the Buyer resells any Somfy products to another buyer or end User, it shall include all of the terms and provisions of this warranty in such resale. Somfy's responsibility to any such third party shall be no greater than Somfy's responsibility under the warranty to the original buyer.

Exclusions

The following are exclusions from warranty:

1. If usage, adaptation or installation are not in accordance with our written installation and operating instructions.
2. If the product has been opened, dismantled or returned with clear evidence of abuse or other damage.
3. If our written specifications are not properly applied by the Buyer when selecting the equipment.
4. If our written instructions for installation and wiring of the electrical connections have not been followed.
5. If our equipment has been used to perform functions other than the functions it was originally designed to handle, namely motorising window and door coverings and enclosures e.g. awnings, internal & external blinds, curtains, roller shutters & grilles, projection screens, gates and windows. Please consult SOMFY about warranty for any uses other than the above.
6. If Somfy equipment is used with electrical accessories (switches, relays etc.) that have not been previously approved in writing by Somfy.
7. If the electrical accessories and other components have been used in disregard of the basic wiring diagram for which they were designed.

*Warranty effective from the manufacturing date code.

International Certification

Somfy motors have been tested by electrical authorities around the world.

Australia &
New Zealand

Canada

Italy

Austria

France

Netherlands

Belgium

TUTT GART

Germany

Switzerland

Scandinavia

United States
of America

Europe

China

South Korea

Saudi Arabia

We are proud that our motors carry the marks of the most recognised electrical testing institutions. This indicates conformance to stringent operational and safety standards.

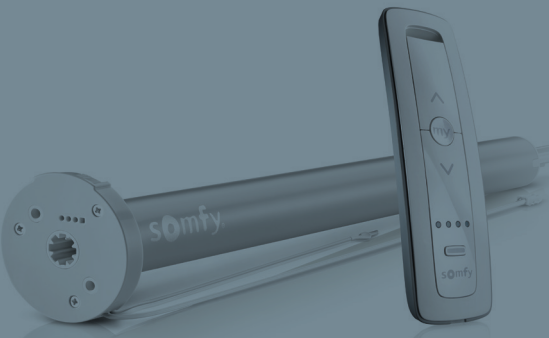

The Quality Management System of Somfy S.A. of Cluses, France has been certified by Lloyds Register Quality Assurance Limited to the ISO 9001 Standard.

Ensure you have read and are familiar with the electrical safety information included in this catalogue.
All work, electrical or otherwise must be carried out by trained and competent staff that are familiar with all safety requirements and operational features of a Somfy motor.

Motor Head	Limit Switch	Motor	Brake	Gearbox	Output Shaft
The motor head supports the motorised roller at one end of the installation whilst providing an entry point for the supply cable. Six different mounting positions allow for easy access of the limit switch push buttons.	Push button or electronic end of travel limit switches can be easily adjusted to set the exact distance of travel in both the UP and DOWN directions.	The Somfy tubular range comprises asynchronous single phase motors with built in capacitors. They are thermally protected, totally enclosed, brushless motors.	An electromagnetic brake automatically stops and holds the load in any position.	Planetary type gears lower the rotor speed and increase the torque. The gearbox is lubricated for life.	The output shaft is the point at which the torque, delivered by the motor, is transferred to the roller tube via the drive wheel to which it will be connected.

Functioning Principle

The motor is supported by the bracket and the roller tube.
The motor drives the wheel.
The wheel drives the motor tube.
The roller tube drives the crown.
The crown turns the limit switch unit within the motor.

Note :
Not all Somfy motors are like the one shown above.
Motor heads, limit switches, output shafts, size, weight, function and overall design can vary depending on the installation type.

Basic concepts & notes for reading this catalogue

Torque

Torque = load x radius

Torque unit: Nm or mkg (10Nm = 1mkg)

Load unit: N or Kg

Radius (diameter ÷ 2) unit: m

Example:

What will be the theoretical weight lifted by a Vega motor (60 Nm or 6 mkg) mounted inside a Ø70 roller tube?

Load = torque ÷ radius

i.e., 60 Nm ÷ 0.035 m = 1714 (171.4 kg)

What is the motor required to lift a 90 kg load with a Ø50 roller tube?

Torque = load x radius

i.e., 900 N x (0.050 m ÷ 2) = 22.5 Nm (2.25 mkg)

As the roller tube is 50mm in diameter, the motor to choose is in the LT50 or Altus 50 range.

Speed

The speed shown is the rotation speed (in rpm) of the motor, and thus the roller tube.

To calculate the average translation speed of the system (in cm/sec) being motorised, use the following formula.

$Sm = ((D + d) \times 3.14 \times n) \div (2 \times 60)$

d = Diameter of roller tube (cm)

D = Diameter of the system when rolled up (cm)

n = rotation speed (rpm) of motor

To calculate the opening time (in seconds) of a roller shutter, use the following formula.

$t = h \div Sm$

h = height of the system (cm)

Sm = average translation speed (cm/sec)

Note:

Whilst every effort has been made to ensure that the information contained in this catalogue is accurate at the time of publication, Somfy recommends that you consult Somfy local office or its dealers prior to placing an order to ascertain current information on specific products, as Somfy reserves the right to make changes without notice. Somfy will not be liable for any injury, loss or damage whatsoever, arising from any errors or omissions in the information contained in the catalogue or arising from the use or application of the information contained herein.

As a world leader in the development of motors for openings, Somfy is committed to delivering control solutions for any installation. Listed below are the major technologies that Somfy employs in order to cover the range of varying integration and connectivity techniques around the world.

Wired Technology is the most basic method of control for a Somfy motor. It uses a direct connection from a control point; e.g., a wall switch to a motor, via a 230v - 240v wire. This wired technique employs two active wires. One, when powered, engages the motor's drive shaft in a clockwise rotation; the other, when powered, engages an anti-clockwise rotation.

Benefits :

- *So-called "wired" technology (control units are linked to the motors via electrical wires buried in the walls) is the most basic way of controlling motors.*

Dry Contact Technology is a wired method of control for a Somfy motor through extra low voltage. It uses a direct connection from a control point to a motor via a DC low voltage wire. It can be easily integrated into a third-party Home Automation system.

Benefits :

- *Manage the control or the motor with extra-low voltage.*

Radio Technology Somfy®

Radio Technology Somfy is an exclusive remote control protocol used to operate selected Somfy motors and controllers wirelessly. RTS uses a rolling code with 16 million combinations to ensure that the RTS communication is safe and secure. In addition, RTS has a range of up to 200 metres (line of sight) or up to 20 metres through two concrete walls. Fast becoming a standard, due to its ease of installation and its flexibility, RTS is reliable as its narrow bandwidth is not interfered with by other systems (telephones, Wifi, Bluetooth, etc.). RTS communication is uni-directional with the control signal being sent from control to motor only.

Benefits :

- *Security: alternating, tamper-proof code with 16 million combinations.*
- *Reliability: its narrow bandwidth means that RTS is not interfered with by other systems (telephones, TVs, Wifi, Bluetooth, etc.).*
- *Upgradability: you can add/change control units and automatic systems over time.*

Remember :

- *Products can be controlled by a remote control or by mobile app through Connexoon or Tahoma.*

Digital Technology Somfy (SDN) is another control method that uses a two-wired bus. Due to the open source nature of the RS485 protocol, many building management systems (BMS) and home automation systems (HAS) use this protocol to communicate to devices. Systems that can use the RS485 connection can be programmed to Somfy RS485 motors or controllers to operate the installation. Due to its open source nature, the integrator just needs to plug the device directly into their BMS or HAS without the need for additional controllers or the adaptation of peripherals. It can get position feedback from motor and control groups of motors to precise position. It is the key technology for building, facade shading management in building control business.

Benefits :

- *Interfaces with a range of centralised building management and home automation systems thanks to the node ID motors. Somfy offers an RS485 motor and an interface to integrate RTS motors into an RS485 installation.*
- *Feedback: You receive confirmation that the command has been executed. You know the exact position of your application.*

The ZigBee® protocol is a low-powered RF mesh networking technology that uses the reliable 2.4Ghz standard for both residential and commercial applications.

As a member of the ZigBee Alliance, Somfy is pleased to offer several interface devices for integration of Somfy-powered motorised products into third-party home automation systems that use ZigBee® technology.

Somfy ZigBee motors are coming soon!

Calculate the weight of blind the motor can drive.			
Tube Diameter			
38mm	40mm	50mm	63mm
2.6 Kg			
4.1 Kg			
5.6 Kg			
7.4 kg	7.1 kg		
	10.7 Kg 14.2 Kg 17.8 Kg 21.3 Kg 32 Kg 46.2 Kg	8.7 Kg 11.6 Kg 14.5 Kg 17.5 Kg 26.2 Kg 37.8 Kg	
		11.6 Kg 14.5 Kg 17.5 Kg 23.3 Kg 29.1 Kg 43.6 Kg	9.4 Kg 11.8 Kg 14.1 Kg 18.8 Kg 23.5 Kg 35.3 Kg

Weight of blind = (Width x Drop x fabric weight per meter square) + (weight of bottom bar per meter)
Please refer to Abacus Table and BSM tools for windows size

Aluminium Venetian Blinds Motor Selection Chart

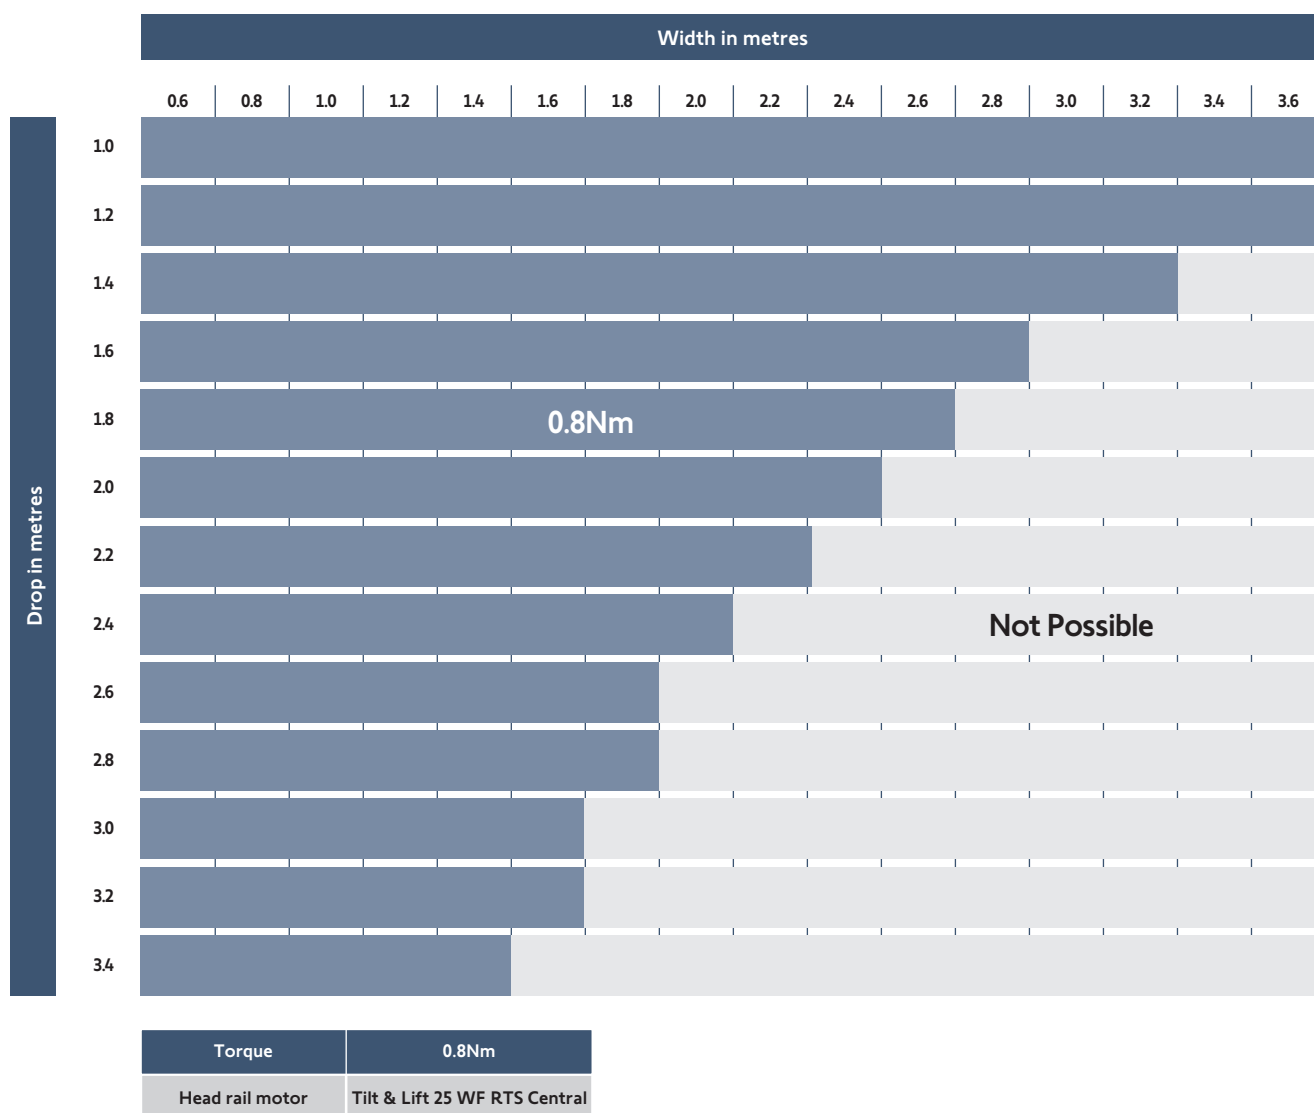

- Select the drop of the application (y-axis).
- Select the width of the application (x-axis).
- Follow both sizes until they intersect, the required motor will fall on the intersection.
- If the sizes fall outside the chart then the application type is not possible under those conditions.

25mm Aluminium Venetian blinds with CTS25

- Slat weight: 550g/m²
- Bottom bar weight: 260g/m
- Cord diameter: 1.4mm

NOTE:

These are the factors used within the selection chart.

Cellular Blinds Motor Selection Chart

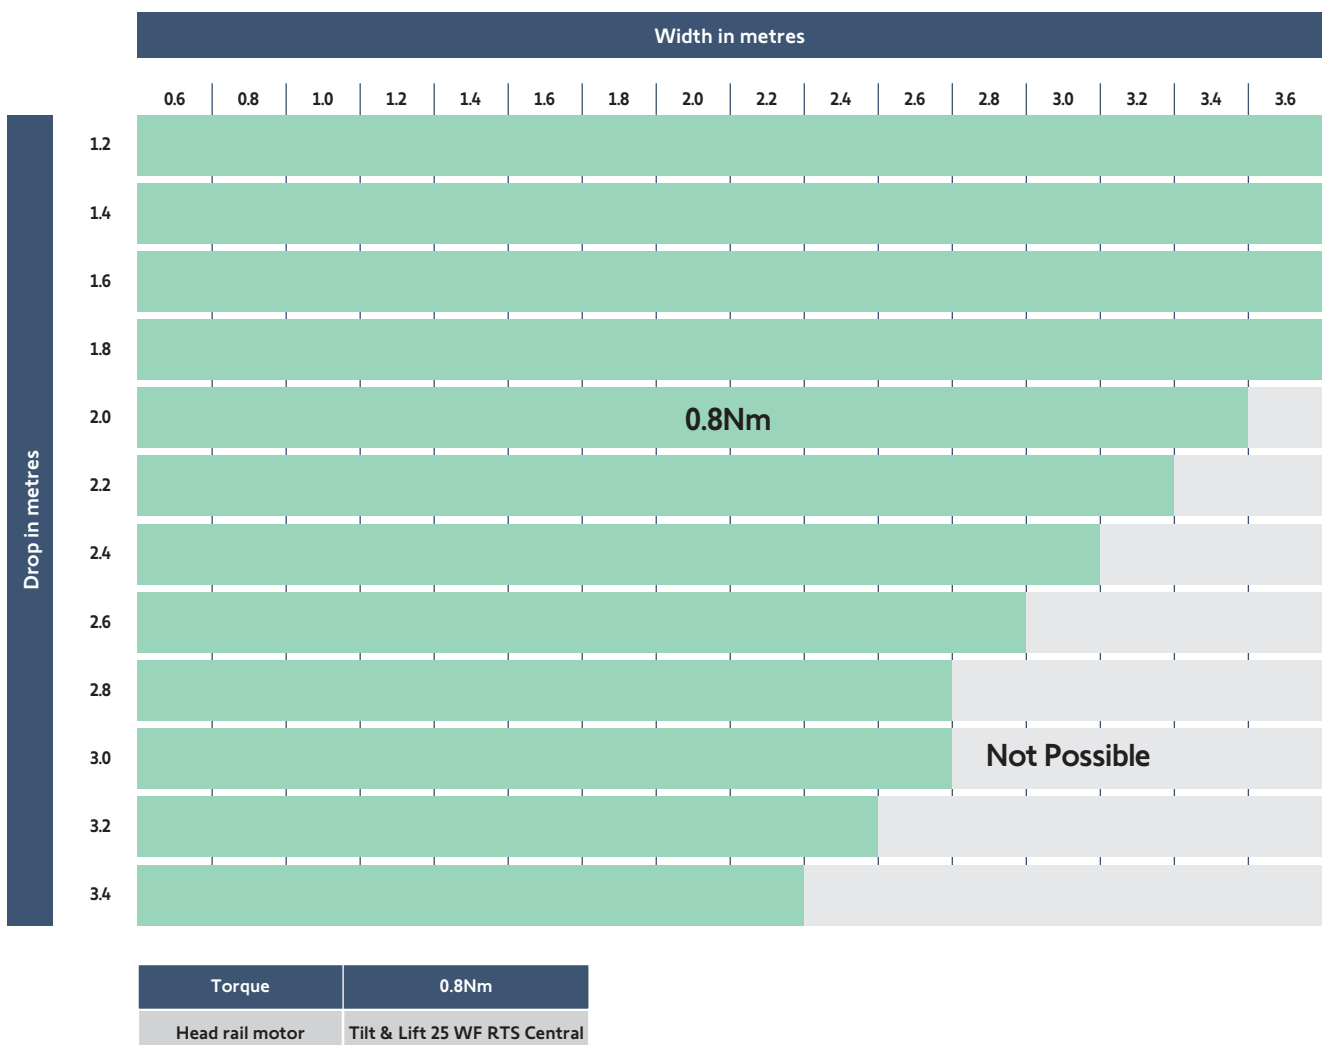

- Select the drop of the application (y-axis).
- Select the width of the application (x-axis).
- Follow both sizes until they intersect, the required motor will fall on the intersection.
- If the sizes fall outside the chart then the application type is not possible under those conditions.

Cellular blinds with CTS25

- **Fabric weight: 310g/m²**
- **Bottom bar weight: 350g/m**
- **Cord diameter: 1.4mm**

NOTE:

These are the factors used within the selection chart.

Timber Venetian Blinds Motor Selection Chart

- Select the drop of the application (y-axis).
- Select the width of the application (x-axis).
- Follow both sizes until they intersect, the required motor will fall on the intersection.
- If the sizes fall outside the chart then the application type is not possible under those conditions.

50mm Timber Venetian blinds with CTS 40

- Slats weight: 2250g/m²
- Bottom bar weight: 550g/m
- Cord diameter: 1.4mm

NOTE:

These are the factors used within the selection chart.

"Sonesse® — a range of quiet motors for interior blinds"

From design to integration, Somfy's objective is to provide high quality acoustic performance that is superior and sustainable.

Sonesse is available with a wide variety of torques and speeds to motorise all interior solutions including the most demanding in terms of aesthetics, well-being and...silence.

ROLLER SHADES

Sonesse® is the solution for all projects. Available in variety of control systems, for all types of spatial configurations in commercial and residential buildings, in both new and renovated projects.

SHEER/ LAYERED SHADES

PROJECTION SCREENS

PLEATED AND CELLULAR SHADES

ROMAN/ WOVEN SHADES

VENETIAN BLINDS

The Sonesse® range is compatible with multiple technologies.

Wired Technology

Offers control via power switching.

Radio Technology Somfy

Compatible with Radio Technology Somfy® (RTS) handheld remotes, a smartphone/tablet app, wireless wall switches, tabletop controls, sensors, timers, and third party automation systems.

Somfy Digital Network

Compatible with home automation systems.

animeo® IP

Compatible with automated total solar management solutions for an individual room or large commercial buildings.

Somfy
DESIGNED FOR
SILENCE

Choose the Somfy
"Designed for Silence"
label

- Choose a motor that guarantees an industry leading level of acoustic comfort.
- Offer a quiet solution for motorized shades every time.
- Conquer new interior applications with added value.

Wired Blind

Sonesse® ULTRA 50 AC

Somfy +

Recommended to use with

- + Silent accessories
- + Silent fabric
- + Professional installation

The quietest and strongest motor on the market:

ULTRA quiet, **ULTRA** powerful, **ULTRA** flexible

Compatible end-products

Roller blinds

Projection screens

Main functionalities

Wirefree Blind

“Connect your customers to more choice and deliver a better way of life.”

Somfy's WireFree™ technology brings true peace of mind and accessible home comfort. Inspire your customers with the versatility of WireFree™ solutions powered by Somfy. This technology offers unlimited scope and powers to automate, connect an extensive range of blinds and window types. There is no need for domestic wiring and sleek designs blend seamlessly into any interior décor. Motorisation means no hanging cords, so you are secure in specifying a child-friendly and pet-safe settings. Either with built-in or external rechargeable lithium-ion battery, Somfy WireFree™ range ensures comfort, efficiency and convenience.

Compatible with the following applications:

Radio Technology Somfy

Compatible with Radio Technology Somfy® (RTS) handheld remotes, a smartphone/tablet app, wireless wall switches, tabletop controls, sensors, timers, and third-party automations systems.

5 things you need to know about WireFree Li-ion motors

1

Why do we choose Li-ion battery motors?

The Lithium-ion battery is a type of rechargeable battery, with advanced & proven technology

Lithium-ion batteries are commonly used in our day-to-day devices, such as :

- Smartphones & Tablets
- Laptop computers
- Power tools
- Electric cars

Lithium-ion technology has several advantages compared to other rechargeable batteries such as NiMH and NiCad :

- ✓ It saves 30% space
- ✓ It has virtually no memory effect. Charging and discharging does not cause a decrease of the battery capacity
- ✓ Low self-discharge: Li-ion battery can be stored without needing to recharge.

How many Lithium-ion cells are needed to power Somfy WF Li-Ion motors?

Each Somfy Li-ion battery pack contains 3 Li-ion cells. Do you have a guess for electric cars? Can you imagine the Tesla model S is powered by 7 000 Li-ion cells!

2

Somfy Quality

Since 2017, Somfy Quality Management System has been ISO 9001: 2015 certified for the whole Group. Our best practices are shared throughout the Group's entities with the objective to offer the same level of quality to customers all around the world over the years. This means regular certification audits are conducted at our development centers, manufacturing, logistics and distribution sites.

A global Group supply chain management and qualification process assures quality and safety standards are followed by our whole suppliers' network. This guarantees reliable suppliers, quality process and safe components.

A reliable supplier for Li-ion battery packs

Somfy guarantees the choice for the most reliable supplier of Lithium-ion technology in the market with a mature, robust and controlled manufacturing process.

Are Somfy WireFree™ Li-ion motors safe?

The Somfy Li-ion offer is comprised of three main elements:

- Li-ion battery packs
- WireFree™ Li-ion motors
- Li-ion chargers

The function of each element is meticulously tested in order to ensure safe, optimal performance for Li-ion battery cells.

Somfy Li-ion battery packs

Somfy Li-ion battery packs incorporate a special Protection Circuit Module (PCM) to ensure battery cell safety and prevent the following:

- Overcharging and over-discharging
- Overcurrent and short circuit protection

Our Li-ion battery packs comply with:

- ☑ IEC 62133 (Battery Safety testing)
- ☑ UN 38.3 (Recommendations on the transport of Dangerous Goods)
- ☑ UL 2054 (Household and Commercial batteries)

Somfy WF Li-ion motors

Somfy WF Li-ion motors utilize an advanced technology to monitor and manage the state of the Li-ion battery, thus preventing any possibility of overcharge and over-discharge.

Our WF Li-ion motors comply with:

- ☑ IEC 60335 (Household appliance safety standard)

Somfy Li-ion chargers

Somfy Li-ion chargers manage the charge of the battery packs. They are specific for Li-ion technology in order to ensure a safe and rapid charging.

Our Li-ion chargers comply with:

- ☑ UL 1330 (Appliance Wiring Materials)

Somfy Li-ion technology passed the following tests:

- Thermal testing – temperature extremes
- Vibration & shock testing
- Short circuit
- Impact/crush
- Overcharge
- Forced discharge

4

What's the autonomy of WireFree™ Li-ion motors?

The overall autonomy of WF Li-ion motors can depend on many factors. Some of these factors may include:

- Type of fabric
- Friction / Load
- Installation of system
- Accessories used
- Frequency of use
- Motor speed
- Radio Frequency (RF) interferences
- Temperature and humidity conditions

To ensure performance consistency, all our motors have been tested on specific reference shades, depending on the type of motor. Here's an example for Roll Up 28 WF motors (0.7 Nm / 1.1 Nm / 1.5 Nm) :

	Roll Up 28 WF motors (0.7 Nm / 1.1 Nm / 1.5 Nm)
Roller tube diameter	32 mm
Shade size	Width : 1.2m - Drop : 2.2m
Friction / Load	20%
Room temperature	20°C
With 1 cycle (up and down) per day	

What are the results?

Somfy WF Li-ion motors need to be recharged once or twice a year (for approximately 4.5 hours) depending on the motor type used. For additional details, please refer to the Somfy Blinds & Shades Motorization (BSM) calculation tool.

Will I ever need to replace the Li-ion rechargeable batteries?

Like all batteries, Li-ion batteries may eventually require replacement. An increased frequency in charging of shade may suggest that the battery is slowly degrading. Should you experience this, the Li-ion batteries will likely need to be replaced. However, replacing Li-ion batteries used in Somfy products is possible through trained professionals or Somfy Experts. This will eliminate the extra cost of replacing the entire system.

5

Somfy warranty

Somfy provides a 5-year warranty on motors and controls. Specifically, Somfy warrants its motors and controls to be free from defects and workmanship under normal and proper use for a period of 5 years commencing with the date stamped on the product. A limited 2-year warranty is offered on Lithium-ion batteries.

* 2 years limited warranty on batteries

How to return Li-ion motors?

The packaging provided with Somfy Li-ion motors is designed and tested in accordance to the transport regulations.

We strongly suggest to reuse it when returning motors.

Wirefree Blind

Sonesse® ULTRA 30 WF RTS Li-ion

Somfy
DESIGNED FOR
SILENCE

Lithium-ion +

Built-in battery motor:

- + All-in-one solution
- + Aesthetic
- + Compact & light
- + Battery power indicator
- + Easy recharging

The **Sonesse® ULTRA 30 WF Li-ion** is the quietest wirefree motor dedicated to a wide range of interior applications. It features a rechargeable built in Li-ion battery, a powerful lifting capacity and it is capable of precise tilting of blind slats.

Compatible end-products

Roller blinds

Roman blinds

Pleated and cellular
blinds

Zebra blinds

Sheer horizontal
shades

Track & Accessories

Wired Curtain

“Automation for different types of curtains”

To protect and extend the life of curtains, Somfy has developed efficient high-precision motors. The Somfy curtain motor and track can be easily integrated with all types of curtains (traditional, wave or pleat, with or without blackout). In perfect harmony with your interior. The motor is concealed almost invisibly behind the curtain. With Somfy solutions, your curtains will always be perfectly aligned to create an elegant ambiance for your clients.

Glydea™ ULTRA is the pinnacle of Somfy's wired curtain motor range. It is packed with innovations that provide an acoustic performance of less than 38dBA...one of the quietest motorisation solutions in the market. This exceptional achievement absorbs the noise and vibration within the motor and across the entire system. It is the premium solution for residential and commercial projects.

Wired Technology

Offers control via power switching.

Radio Technology Somfy

Compatible with Radio Technology Somfy® (RTS) handheld remotes, a smartphone/tablet app, wireless wall switches, tabletop controls, sensors, timers, and third party automation systems.

Somfy Digital Network

Compatible with home automation systems.

animeo® IP

Compatible with automated total solar management solutions for an individual room or large commercial buildings.

DRY CONTACT

Offers control via DC low voltage

Somfy
DESIGNED FOR
SILENCE

Choose the Somfy
“Designed for Silence”
label

- Choose a motor that guarantees an industry leading level of acoustic comfort.
- Offer a quiet solution for motorised shades every time.
- Conquer new interior applications with added value.

Traversing capacity

Motor load capacity according to track opening, shape and length.

In the charts below we give the maximum weight of curtain in Kg, which has to be motorised by different curtain motor versions according to the different track configurations and lengths of the track.

When calculating the weight of the curtain, the fullness ratio of the curtain has to be taken into account:

Weight of the curtain = fabric weight/m² x curtain covered area x fullness ratio

The traversing capacity is given for an installation with no extra friction created by the fabric curtain touching the rail or the track pelmet.

Bending radius minimum 300mm

Due to the bending process, 285mm of the rail is still straight on both sides of the curve or the arc shape.

Arc radius minimum 3000mm

Track Type : One way

R = 300 mm

R = 300 mm

R = 3000 mm

Track Type : Two way

R = 300 mm

R = 300 mm

R = 3000 mm

Wired Curtain

Traversing capacity

Bending measurement guide

For bending or curving tracks length and radius limitation, please refer to the specific datasheet.

Radius limitation:

Bend: $300\text{mm} \leq R < 3000\text{mm}$

Curve: $R \geq 3000\text{mm}$ (max. length in one part 4430mm, in two parts 8860mm)

Due to the bending process, 285mm of the rail is still straight on both sides of the curve

Our logistics department is able to provide customised bent and curved tracks.

Only under the following specifications:

- Minimum radius possible: 300 mm
- Bending angle between: 0° to 180°
- Shape available: Bend $300\text{ mm} \leq R < 3000\text{ mm}$.
Curve $R \geq 3000\text{mm}$
(max. length in one part 4430mm, in two parts 8860mm).

Bent one radius

Arc one radius

Bent two radius

Arc two radius

Not available shape from Somfy Logistic.

Bent opposite radius

Arc more than 2 radius

Bending measurement guide

How to measure a bent or curved track for Somfy curtain motors?

- For each alternation of straight and curved part we allocate a segment.
- For straight part, the length is in mm.
- For curved part, the radius is in mm + the angle is in degrees.

Segment	Length (mm)	or	Radius (mm)	and	Angle (degrees)
1	600	or	--	and	--
2	--	or	450	and	61
3	2000	or	--	and	--

Somfy curtain motor selection charts

Universal accessories

Ref. 1 781 415

High performance rotating eye runner

- Runner mounted on wheels with rotating eylet.
- Cannot be used with cannot ripple fold.
- Wheel shape make it quieter.
- Qty: typical 10 per meter.
- Color: White.
- Unit weight: 3.2g

Ref. 1 780 895

Motor hook White GA

- Plastic hook to hang the curtain on the pulleys.
- Quantity needed is minimum 1 for one-way tracks & 2 for two-way tracks.
- More might be needed.
- Color: White.
- Unit weight: 2.3g

Ref. 1 782 645

Motor hook Grey GA

- Plastic hook to hang the curtain on the pulleys.
- Quantity needed is minimum 1 for one-way tracks & 2 for two-way tracks.
- More might be needed.
- Color: Grey.
- Unit weight: 2.3g

Ref. 1 780 901

Ripple runner 1 7/8 GA

- Runner mounted on wheels for 120% fullness ripple curtains.
- Supplied in a roll of 500 runners.
- Cord already snapped on the runner body.
- 500 snap pendants supplied in a different bag.
- Width 14mm Max. load 1.5kg.
- Qty usually 21 / m

Ref. 1 782 310

Rotating ripple eylet runner 60mm GA

- Runner mounted on wheels for 80% fullness ripple curtains.
- Supplied in a roll of 500 runners.
- Cord is already snapped on the runner body.
- 500 rotating runner eylet supplied in a different bag.
- No need to use snap tape.

Ref. 1 780 902

Ripple runner 2 1/8 GA

- Runner mounted on wheels for 100% fullness ripple curtains.
- Supplied in a roll of 500 runners.
- Cord already snapped on the runner body.
- 500 snap pendants supplied in a different bag.
- Width 14mm Max. load 1.5kg.
- Qty usually 19 / m

Ref. 1 782 848

Rotating ripple eylet runner 80mm GA

- Runner mounted on wheels for 100% fullness ripple curtains.
- Supplied in a roll of 500 runners.
- Cord is already snapped on the runner body.
- 500 rotating runner eylet supplied in a different bag.
- No need to use snap tape.

Ref. 1 780 903

Ripple runner 2 3/8 GA

- Runner mounted on wheels for 80% fullness ripple curtains.
- Supplied in a roll of 500 runners.
- Cord already snapped on the runner body.
- 500 snap pendants supplied in a different bag.
- Width 14mm Max. load 1.5kg.
- Qty usually 17 / m

“Motorised blinds and curtains make possible at the touch of a button.”

Our remote controls come with several functions, centralised control, timers, individual or multi-device control, slat adjustment, intuitive interface, etc.

Exclusive to Somy

The “my” button

Use this button motorised your favourite position for an individual motorized application or a group of motorized application and access it instantly!

Example: Program the motorised horizontal blinds to a favourite position of halfway open. Whenever you want to open them halfway. Simply press the “my” button.

Channel setting creates personalisation according to the end users' preference. Channel is defined as one window application or group of applications. You can operate multiple channels from the same remote control. Create groups that make sense for your daily life such as assigning all motorised products in the same room to one channel; or assigning your motorised curtains to one channel and blinds to a separate channel so that they always raise and lower together.

Somfy remote controls are compatible on multiple technologies.

Wired Technology

Offers control via power switching

Radio Technology Somfy

Compatible with Radio Technology Somfy® (RTS) handheld remotes, a smartphone/tablet app, wireless wall switches, tabletop controls, sensors, timers, and third party automation systems.

Somfy Digital Network

Compatible with home automation systems.

animeo® IP

Compatible with automated total solar management solutions for an individual room or large commercial buildings.
